Proven attendance, trusted performance.

## In security operations, saying a visit took place is no longer enough.

Manual logbooks and radio check-ins rely on human input, which creates uncertainty — exposing security firms and property teams to disputes, compliance risk, and reputational damage.

Kinexio Proof of Presence provides verified, timestamped and geolocated confirmation of attendance — giving teams, managers and clients complete confidence in service delivery.

The operational challenge

Security and facilities teams often face:

- Unverified site visits and missed patrol attendance
- Disputes with clients over service delivery
- Manual reporting processes that consume valuable time
- Limited visibility across multiple sites and teams
- Compliance exposure due to lack of defensible audit trails

When attendance cannot be proven, operational performance becomes harder to measure — and harder to trust.

The Kinexio Proof of Presence solution

Proof of Presence enables frontline teams to confirm attendance quickly and securely using Trusted NFC Tag technology, automatically capturing:
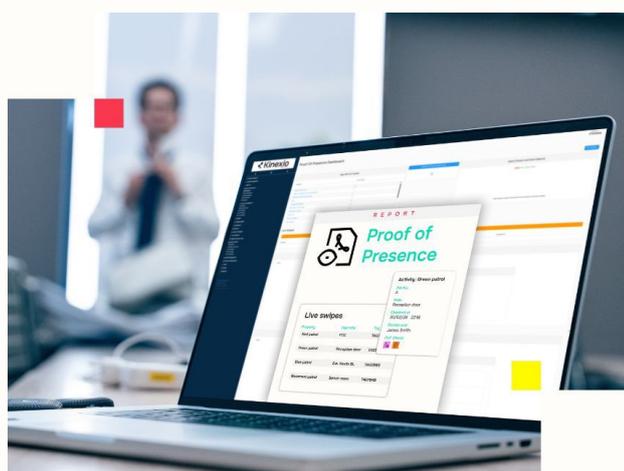

- ✓ Exact time of arrival
- ✓ Verified location
- ✓ Officer identity
- ✓ Frequency of visits
- ✓ Real-time attendance status

This creates a complete digital record of presence — accessible instantly by supervisors and stakeholders.

Why Proof of Presence makes a difference

Benefit	What it means for you
Reduce attendance disputes	Clear, verifiable evidence of site visits
Improve SLA performance	Automated monitoring of service delivery
Lower administrative workload	Eliminate manual logbooks and reporting
Strengthen client confidence	Transparent attendance data builds trust
Enhance lone worker safety	Verified welfare check records

Kinexio Proof of Presence is designed for real-world environments, enabling officers to confirm attendance in seconds, while giving managers full operational visibility.

Supervisors can instantly see which sites have been attended, helping to identify missed visits or delays, across multiple locations, teams and contracts from a single platform.

How it works (in plain English)

1. Officer arrives at site
2. Secure Trusted NFC tag is scanned using the Kinexio mobile app
3. Timestamp and location are automatically recorded
4. Attendance data is synced instantly to the Kinexio dashboard
5. Managers monitor site coverage across buildings and teams
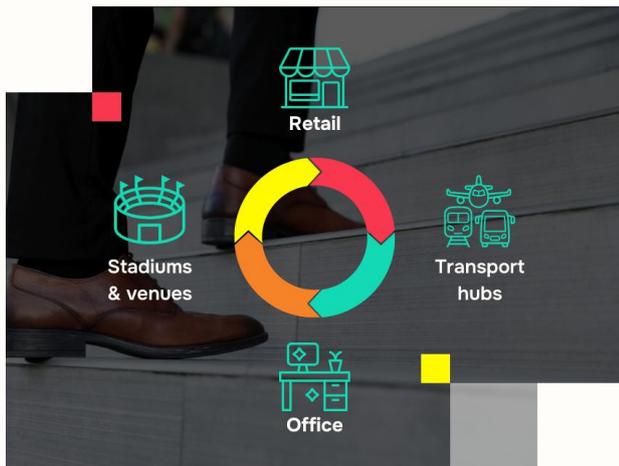

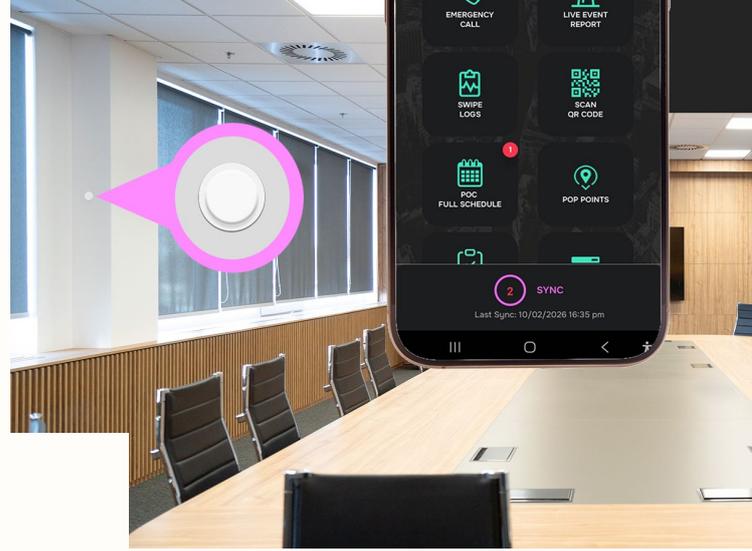

What is Trusted NFC?

On tapping, a unique, encrypted URL is activated verifying the tag and location with a timestamp.

From proving attendance to improving performance

Verified presence tracking does more than confirm visits; it enables security providers and property operators to strengthen operational standards, improve transparency, and build trust with clients.

All attendance data is securely stored and easily accessible for reporting, compliance reviews, and client evidence.

Built specifically for security operations and property environments, the platform scales from single buildings to national portfolios. Kinexio gives organisations the tools they need to operate with confidence.

Why Kinexio

Kinexio provides one connected platform for:

- Proof of Presence
- Proof of Compliance
- Patrol management
- Incident reporting
- Key & asset management
